SUMMARY

M.S. Data Science candidate at Northeastern University, Silicon Valley, expected May 2027, with a Bachelor's degree in Computer Science and prior software/data engineering experience at VASS LATAM and Universal Bank B.O.D. Skilled in SQL, Python, machine learning, NLP, RAG systems, and cloud-based analytics workflows. Builds data pipelines, AI applications, and analytical systems that transform complex data into reliable, reviewable insights.

EDUCATION

Northeastern University — M.S. Data Science

May 2027 | San Jose, CA

- Relevant coursework: Computer Vision, Natural Language Processing, Machine Learning, Unsupervised Learning, Algorithms, Database Systems, Data Management.

Universidad Simón Bolívar — B.S. Computer Science

2006 – 2014 | Caracas, VE

CERTIFICATIONS & RECENT AI COURSEWORK

- Google Cloud — Fraud Detection on Financial Transactions with Machine Learning on Google Cloud (May 2026).
- Anthropic — Claude Code 101; Introduction to Subagents; Introduction to Agent Skills; AI Capabilities and Limitations; AI Fluency Framework & Foundations; Claude 101 (Apr–Jun 2026).
- DeepLearning.AI / Stanford — Supervised Machine Learning: Regression and Classification; Advanced Learning Algorithms; Natural Language Processing with Classification and Vector Spaces (Jul–Sep 2025).
- UC Berkeley Extension — Berkeley Data Analytics Boot Camp (Jul 2022); STATX10-068 Introduction to Statistics (Jan 2024).
- LinkedIn Learning — Intermediate SQL for Data Scientists; Advanced SQL: Logical Query Processing, Part 1; SQL Essential Training; Advanced Python; Unit Testing and Test Driven Development in Python; Learning REST APIs; Business Analysis Foundations (2019–2023).
- OpenEDG — PCEP: Certified Entry-Level Python Programmer (Nov 2022).

TECHNICAL SKILLS

Analytics & Statistics: Product analytics, KPI definition, root-cause analysis, SQL analysis, trend analysis, summary statistics, data validation, reporting, dashboards.

Programming: Python, SQL, JavaScript, Git, Linux

Data Science / ML: scikit-learn, Pandas, NumPy, model evaluation, classification, clustering, NLP, embeddings, semantic retrieval, RAG, LLM workflows

Data Engineering: ETL pipelines, SQL Server, MySQL, Oracle SQL, PL/SQL, Spark, data quality checks

Cloud & Tools: GCP, BigQuery, Vertex AI, Cloud Storage, Compute Engine, App Engine, AWS S3, AWS RDS, Docker, Docker Compose

Visualization Tools & Frameworks: Tableau, Plotly, Matplotlib, Flask, Django.

Languages: English, Spanish

PROFESSIONAL EXPERIENCE

Full Time Parenting — Career Break

Mar 2017 – Present | San Jose, CA

- Took a planned career break for full-time parenting while continuing professional development in data science, analytics, machine learning, and AI through UC Berkeley Extension, LinkedIn Learning, Coursera, MSDS and self-directed projects.

VASS LATAM — Software Developer, SOA CRM

Sep 2015 – Aug 2016 | Santiago, Chile

- Designed PL/SQL and Oracle SQL scripts enabling 80+ web services to access integrated payments, credit, and customer data sources in a service-oriented architecture.
- Built ETL pipelines with MySQL, PL/SQL, and Oracle Data Integrator to consolidate high-volume transactional data into a transformed layer, cutting query times and accelerating decision-support reporting.

Neuvoo/Talent.com — Data Scraper (Freelance)

May 2015 – Aug 2015 | Remote

- Built and maintained 20+ daily production-ready scraping scripts to automate job posting extraction from job boards and company websites, increasing job listing coverage, automated ingestion, supporting job search visibility for millions of users using JavaScript, jQuery, PHP.

Universal Bank B.O.D — Database Specialist

Jun 2014 – Jun 2015 | Caracas, VE

- Built 100+ SQL Server pipelines, schedule jobs, ETL/data deliver infrastructure to deliver financial information across multiple business departments.
- Developed IBM Cognos Report Studio reports on customer and account activity, identifying trends and producing analytics summaries used by Business Managers for monitoring, analysis and decision-making.

Sudeban — Software Developer Intern

May 2013 – Oct 2013 | Caracas, VE

- Built, configured, and integrated corporate internal portal with 30+ workflows and portlets company-wide employee base, enhancing security and privacy, internal banking systems integrations, internal data access information and communication, achieving 100% adoption across departments within 3 months of deployment using Liferay framework, SQL, LDAP.

Banco Agricola — Software Developer Intern

Jul 2011 – Sep 2011 | Caracas, VE

- Built production-ready Full Stack Inventory System that centralized tracking of millions hardware assets, improving assets visibility, reducing manual tracking, saving time, resources, processes and communication across all banks areas using Symfony framework, PHP, PostgreSQL, JavaScript, HTML, CSS.

RELEVANT AI PROJECTS

SQL Educational System — QueryMinds | Northeastern University

Jan 2025 – Jul 2025

https://github.com/lindaperez/DB_QueryMinds

Python, Django, React, SQL, GCP App Engine, GPT, Product Analytics

- Delivered a full-stack AI learning application using Python/Django and React, integrating GPT-based SQL autocorrection, hint generation, and learner/class analytics dashboards, translating open-ended learning needs into structured product features and measurable outputs.

RAG System — Housing Resource Finder | Northeastern University

Sep 2025 – Dec 2025

https://github.com/lindaperez/NLP_Housing_Vector_DB

Python, Flask, GCP, Llama 3.1, Ollama, Embeddings, Vector Search, Docker

- Built a Python/GCP AI data pipeline for noisy PDFs and web documents, including parsing, normalization, chunking, embeddings, vector indexing, and retrieval-based inference, improving output reviewability by returning citation-numbered source chunks through a Flask API and frontend citation modals, enabling users to inspect evidence behind model responses.

Credit Risk Analysis

Jan 2022 – Jul 2022

https://github.com/lindaperez/17_bk_AI_Credit-Risk-Analysis

Python, Jupyter Notebook, Machine Learning, Financial Analytics, Classification

- Framed credit risk prediction as a business decision problem, connecting model outputs to risk assessment, customer segmentation, and financial decision support using ML techniques including evaluation.

Bikesharing / Ride-Sharing Analytics Project

Jan 2022 – Jul 2022

https://github.com/lindaperez/14_bk_Bikesharing

Python, Pandas, Tableau/Matplotlib, Data Visualization, KPI Analysis

- Analyzed transportation usage data to evaluate customer behavior, demand patterns, city-level performance, and business viability.
- Produced visual summaries and KPI-oriented insights to support recommendations around market opportunity, service performance, and operational trends.
